

# Goat River Water Sustainability Planning Project Update

December 2025 | Latest News

## Join us at upcoming events!

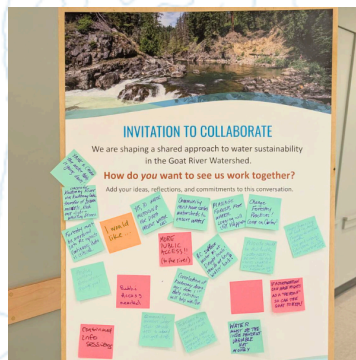

### Open Houses

Thank you to everyone who attended the recent open houses. Your insights and local knowledge are helping inform the Water Sustainability Planning process for the Goat River Watershed.

For those who couldn't make it, check out the resources below:

- **Open House Displays**
- **Project Overview Presentation**
- **Water Sustainability Planning FAQ**
- **Kitchen Table Conversation Guide**

The **Water Values Survey** is still open. Please take a moment to complete the survey and share it with others in your community.

## Get Involved

## Lunch and Learn: Agriculture & Water

Producers are invited to a Lunch and Learn on January 8 at Jimmy's Pub to talk about water, agriculture, and planning for water sustainability in Goat River Watershed. Hear from local experts, share your experiences, and help shape the future of the Goat River Watershed. [Learn more.](#)

**Date:** Thursday, January 8, 2026  
**Time:** 11:30 am–3:00 pm  
**Location:** Creston Hotel (Jimmy's Pub)

## Feature Story

## Become a Connector

### Host a Kitchen Table Conversation

Kitchen Table Conversations are a simple, meaningful way to bring people together and talk about the water that sustains the valley.

As a Connector, you bring together a few family members, friends, or neighbours for a conversation about the river and watershed. You might share what you have noticed over time, what concerns you, what gives you hope, and what a healthy watershed could look like in the future. These small conversations could spark insights into what matters most to people in the Goat River Watershed.

With the holidays approaching, it could be a good moment to pause, settle in with a warm drink, and spend some time exploring the Kitchen Table Conversation Guide.

## Did You Know?

## Drought & Crops

Fall drought doesn't just dry out fields. It can also stress fruit trees and vines, leading to weaker crops the following year. Water shortages today ripple into our future food supply.
